

Sisu Mahila Samridhi

Deployment, Operation & Troubleshooting Guide

WD&CW Jangaon · Government of Telangana This guide explains how to install, use and troubleshoot the Sisu Mahila Samridhi app. Installed phones receive every update automatically — nothing ever needs reinstalling.

Installation is by **QR code only** — every sector receives the official printed QR poster (`INSTALL-POSTER.png` in this folder). No address is typed and no link is shared on WhatsApp: the poster's QR is the single official entry point.

SCAN WITH THE PHONE CAMERA TO INSTALL

How to check which version a phone is running: scroll to the bottom of any screen — the grey line reads `BUILD: v4.2` (or newer) with a date. When reporting a problem, always note this build number.

Part A — Installing the app on a field phone

Requirements: any Android phone with **Chrome** and a working internet connection (only for the first install and for syncing — daily marking works offline).

1. Point the phone **camera** at the official QR poster and tap the link that pops up (choose **Chrome** if asked).
2. Wait for the login screen to appear (emblem on top, "Sisu Mahila Samridhi").
3. A green "**↓ Install this app on the phone**" button appears at the top — tap it, then tap **Install** on the confirmation. Done: the **Samridhi** icon appears on the home screen.
4. If the green button does not appear on an older phone: tap Chrome's **:** menu (top-right) → "**Add to Home screen**" → **Install**.
5. From now on, always open the app **from the icon**, not from Chrome.

⚠ **Install only by scanning the official QR poster.** Never from a forwarded

link or message.

What NOT to do on an installed phone

- Do **not** clear Chrome's "browsing data / storage" — that deletes the saved login and any attendance marks waiting to be sent.
- Do not use phone "cleaner/booster" apps on Chrome for the same reason.

- Do not block Chrome in battery saver if the phone offers an exception list.

Part B — First login (each worker, once)

1. Open the app from the **Samridhi** icon.
2. Enter your **10-digit mobile number** (the one in the department register).
3. If the phone is shared by the Teacher and the Helper, the app asks "**Tap your name**" — choose yourself.
4. First time only: the app asks you to **choose a 4-digit PIN** (enter it twice). This PIN is yours alone — the second worker on the same phone sets her own.
5. Read the privacy note shown on screen; setting the PIN records your consent.
6. When Chrome asks for **Camera** permission → tap **Allow**. When it asks for **Location** permission → tap **Allow** (choose "While using the app").

Adding the second worker on a shared phone: from the home screen tap **Switch user** → + **Add another user** and repeat the steps above with her details.

Part C — Daily operation (field workers)

Marking IN (morning):

1. Open the app from the icon.
2. Tap the big green **IN** button.
3. Hold the phone up so your face fills the white corner frame; wait for the GPS line below the camera to settle (green = location found).
4. Tap **TAP TO CAPTURE**. The green "Attendance saved" screen confirms it.

Marking OUT (evening): same steps — the big button says **OUT** after the morning mark.

If there is no network: mark exactly as normal. The yellow banner says the mark is saved on the phone. It is sent automatically when network returns — nothing to do, and it can never be sent twice. The middle box on the home screen shows how many marks are **Pending**; it becomes 0 after sync. **Sync now** forces an immediate attempt when on network.

Leave: Menu (≡) → **Apply for leave** → choose dates, type, reason → Submit. Leave is auto-approved per district policy; the console shows it, and leave days are not counted as absent.

My record: home screen → **My record** shows your own recent marks and whether each is synced (✓) or pending.

Rules built into the app (no exceptions needed):

- A mark is **never blocked** — poor GPS, no GPS, or being outside the centre only flags

the mark for the office to review; it always saves.

- Photos come only from the live camera (no gallery), are compressed, stamped with place

and time, and are deleted from storage after 45 days.

Part D — How updates reach phones

The app updates itself. When a new build is published, each phone downloads it silently on the next open **with network** and reloads to the new version (never in the middle of a capture or sync). No reinstall, no visit to any store. Verify by checking the BUILD line.

Two things do **not** update automatically on already-installed phones:

- The **home-screen icon and name** — frozen at install time. To refresh them: remove the

icon and Add to Home screen again (login and pending marks are kept).

Part E — Troubleshooting

#	Problem	Fix
1	"Number not found" at login	The number differs from the register. Verify against the register; the district office corrects the register entry, then retry after the next data refresh.
2	Forgot PIN	Call the district office → they reset it → login again and set a new PIN.
3	Camera is black / "camera error"	Phone Settings → Apps → Chrome → Permissions → Camera → Allow. Then close and reopen the app. If another app is using the camera, close it.
4	GPS line stays "Getting GPS..." or shows poor accuracy	Turn ON phone Location (high accuracy), step outside / near a window, wait 10–15 s. If it never comes, capture anyway — the mark saves and is simply flagged; never skip attendance because of GPS.
5	Mark shows "Pending" for a long time	The phone has no working internet. On network, open the app and tap Sync now . Marks wait safely for days if needed and never duplicate.
6	"You are offline" banner won't go away despite network	The phone may be on a captive/blocked Wi-Fi. Switch to mobile data, reopen the app.
7	App opens as a plain website with the address bar	It was opened in Chrome, not from the icon. Use the home-screen icon; if the icon is missing, re-do Part A.
8	Old look / old version stays	Tap the ↺ button in the app header (top-right) with network on; the app reloads to the newest build. Confirm via the BUILD line.
9	Icon or app name still the old one after an update	Normal (see Part E). Remove the icon → Add to Home screen again. Login and pending marks survive.
10	Phone was reset / Chrome data was cleared	The saved login and any unsent marks on that phone are gone (already-synced marks are safe on the server). Reinstall (Part A), log in again — the PIN is unchanged.
11	Second worker can't log in on the shared phone	Home → Switch user → + Add another user → her number and PIN. Each worker marks under her own name.
12	Marked, but the district office says it has not received it	Check the phone's Pending count on the home screen (must be 0). Office records refresh about every 5 minutes — ask them to check again after that.
13	Every mark at a centre shows "outside geofence"	The centre's stored location is wrong or missing. Inform the district office — they can re-capture the centre's correct location; marks are never blocked meanwhile.
14	Phone storage almost full	The app itself needs almost nothing, but Android may refuse the camera. Free some space (photos/videos), then retry.

Escalation path: worker → Anganwadi supervisor / sector → **connect with the EDM (e-District Manager) at the district office**, sharing: worker name, AWC, phone model, BUILD number, and a screenshot of the problem.
